

Policy Controller Reference GSM/UMTS Deployment

The Bridgewater® Policy Controller enables GSM/UMTS operators to control network resource usage and application authorization to support fair usage and casual user service models. The Policy Controller functions in pre-standard deployments supporting DPI enforcement points. It also functions as a PCRF in standard 3GPP (R7) deployments, and interfaces with the GGSN using a standard Gy interface to support flat rate metering. Quota Manager provides metering function for flat-rate plans and removes requirement for OCS.
