

# Service Controller Reference GSM/UMTS Deployment

**The Bridgewater® Service Controller** is the most proven, scalable, and robust AAA solution of its kind. It is widely deployed and proven in tier-1 networks to provide a three-fold increase in performance. The Service Controller is access network agnostic and functions as a 3GPP AAA server in GSM/UMTS networks to support WLAN interworking functions with non-3GPP access networks, including interworking with legacy HLRs and also supporting UMA/GAN and IMS/VCC convergent network services.

**Bridgewater's Subscriber Data Broker™** provides a sophisticated subscriber data management system serving all subscribers and applications. Service providers can create a unified view of subscribers, accelerate time to market for new services and leverage a robust, scalable platform for service innovation and personalization in GSM/UMTS networks.
